

ABSTRACT

The present invention provides a method for producing a stabilized fluoropolymer which comprises producing the stabilized fluoropolymer by subjecting a treatment target substance containing a sulfonic-acid-derived-group-containing fluoropolymer to a fluorination treatment, wherein the sulfonic-acid-derived-group-containing fluoropolymer is a fluoropolymer containing $-\text{SO}_3\text{M}$ (in which M represents H, $\text{NR}^1\text{R}^2\text{R}^3\text{R}^4$ or $\text{M}^1_{1/L}$; R^1 , R^2 , R^3 and R^4 are the same or different and each represents H or an alkyl group containing 1 to 4 carbon atoms; and M^1 represents an L-valent metal), and the treatment target substance has a moisture content of not higher than 500 ppm by mass.
